Subject: PADEP Ozone Exceptional Event Analysis for May 24-26, 2016

Kia,

As we discussed earlier today, I am submitting the Department's draft ozone exceptional event analysis for the May 24-26, 2016 period. As discussed in the document, the Department feels that the Fort McMurray wildfires contributed to high ozone across the Commonwealth from May 24 to May 26, 2016 and that ozone data from a select group of monitors in PADEP's and Philadelphia AMS's jurisdiction should be flagged as being influenced by the event.

Please feel free to forward me any comments/questions that you may have regarding this request. I look forward to working with you.

Best regards,

Sean
